

*The  
5 elements  
Symbolising  
Life*

*Air  
Water  
Fire  
Earth  
Space*

Air

Air is the formless the life we breathe

The ocean of diversity, divinity we see

Dwell is the Omnipresent ,the answer is just thee

Scrutiny through the inner self ,air is a wise breeze

Nature of air is existence

Nature of good deeds & divinity should have persistence

Out there is a way to heaven

Life is to raise the falter & gleam to cherish

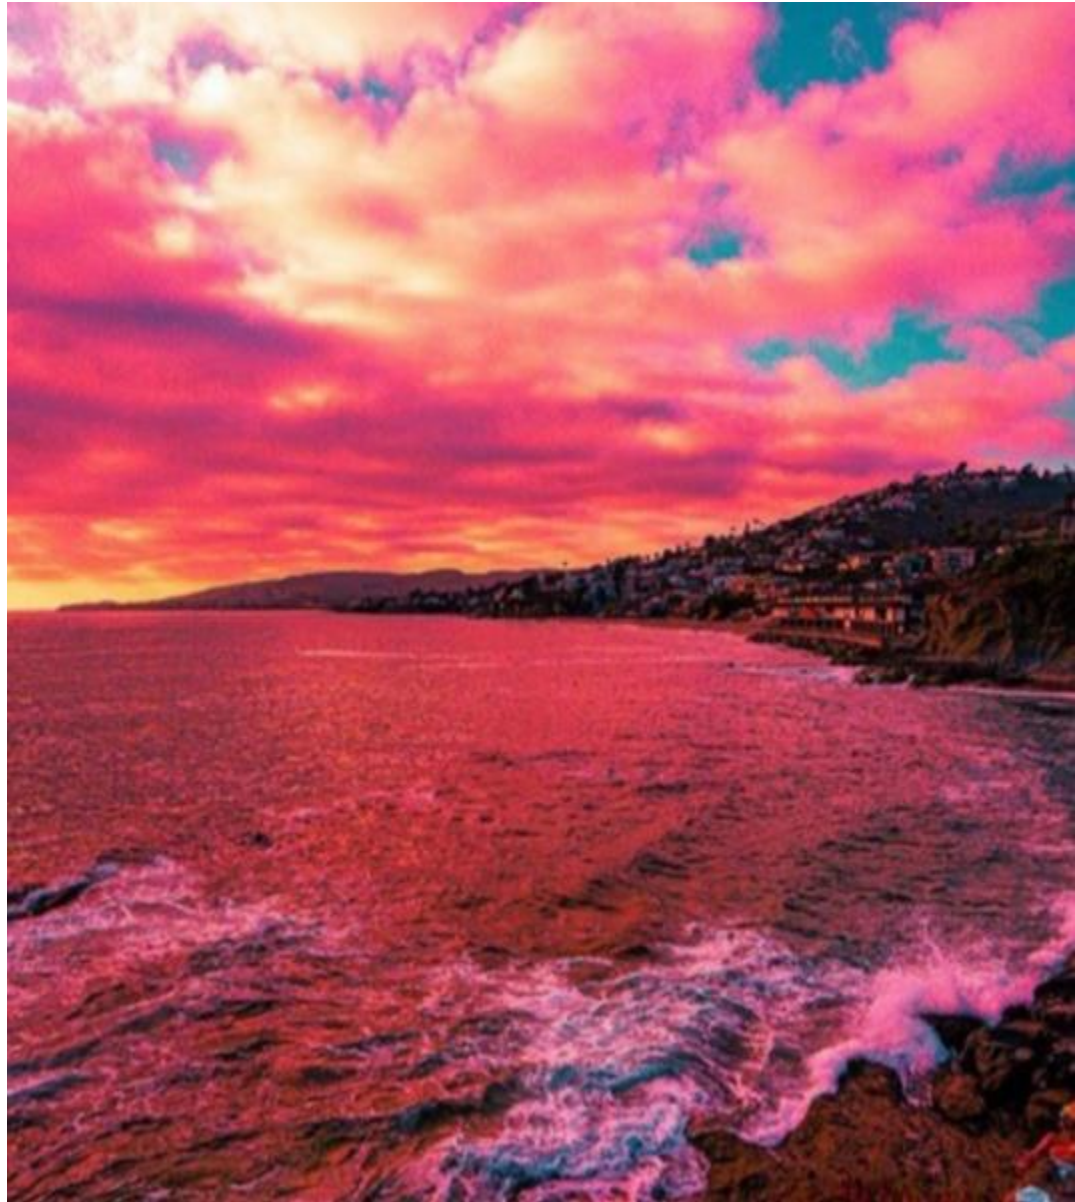

Water

Water is the most prominent among all

It can pass through every prospect ,give us a lesson to learn

Earth and body both are vigorously 3/4 of it

But saving it is the most urgent call

Astonishing waves passing by

Recommending us for a crimson high

Corridor filled with maelstrom tides

Juvenile sliding amid these dreaming vibes

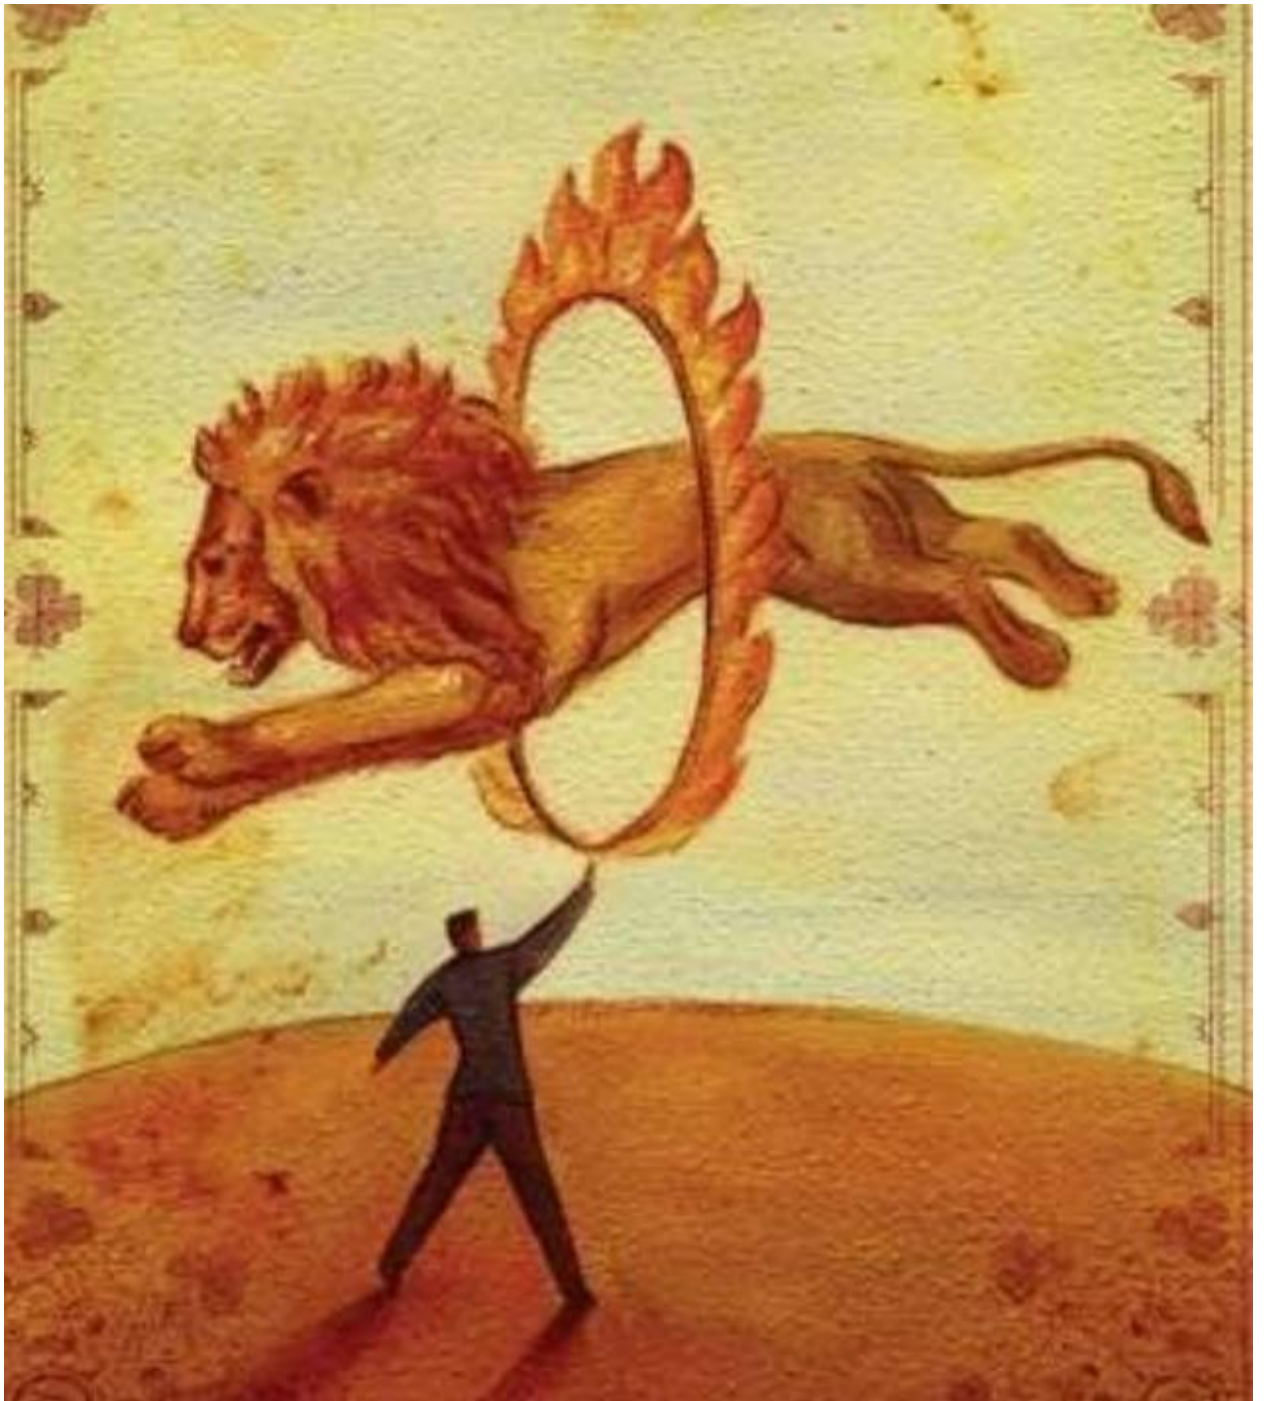

Fire

Fire has an ignition which shines the circus and lions round

Bloom out the cleansing inward which can leave the world astound

It has a blend of colour red as compassionate love aloud

Have fire just to love others & see there 's no bound

Finite is the pleasure of small

We creatures have the minds to blow

Perceive the benediction of the golden crown

You have the power to change exiled to renown

Earth

Mother earth is the origin of us

And look how we have diminished it in our fuss

Nature as the ornaments of it, adorn heart is on stake

O children play a part to save it and let the world awake

Plants, human, animals -being

We all are just the children of one

Don't make a hole, be compassionate

Do not strive to check the dollar size

Mother o earth don't be rude ,we ll give you a better life

Space

Birds are flying high

Chirping besides the morning sunrise

Calls out the names with a voice heart out

Asking us to be a better human

Amending the world do not let the worst mind Shout

Do not crave for something which is free  
Do not stretch your arms for a gentle plea  
For the homes we live should be drenched in sweat  
For the lives we live should be grateful  
And god will keep the rest
